

Kevin Bell

Kevin Bell serves as a Director of Business Development at BAE Systems within the Electronic Combat Solutions group. This division specializes in airborne EW systems for military aircraft and other airborne platforms. He has extensive business development experience across the airborne radio-frequency chain, including airborne radars, onboard and offboard self-protection systems, and offensive electronic attack systems. His professional journey has been marked by significant work and travel experience throughout the Asia-Pacific region, particularly in Japan.

With over 30 years of combined military and industry experience, he has contributed significantly to advancing defense products and building international collaborations. His efforts have enhanced the capabilities of allied naval and air forces, integrating state-of-the-art electromagnetic warfare technologies into mission-critical systems.

During his tenure at BAE Systems, Kevin played a key role in the introduction of the ALQ-250 EPAWSS into the global market space. Prior to BAE Systems, he was associated with Raytheon's Electronic Warfare Systems group, where he contributed to the inception of the US Navy's Next Generation Jammer ALQ-249(V)1 Midband program. This included the integration of the Australian Ministry of Defense into a co-development effort for program advancement.

Continuing to serve as an Officer in the US Navy Reserve, he has completed multiple operational and staff tours in both Active and Reserve capacities. These assignments included the US Indo-Pacific Command, US Seventh Fleet, and US Forces Japan.

He holds academic degrees from the University of Southern California in Los Angeles and Fordham University in New York City.

Although currently residing in Los Angeles, with his family and their dogs, he grew up in Brooklyn, New York, and still identifies as a New Yorker.
